

Billing and Coding Tips and Tools for Midwives

Instructor: Joan Slager, CNM, CPC, DNP, FACNM

Thursday, October 11th 1:00 pm- 5: 00 pm

Session Description

Avoid costly downgrades or denials caused by non-specific ICD-10 codes. Learn when you can bill for postpartum rounds, and how billing codes are used to calculate your productivity. This newly revised and updated workshop will teach you what you need to know about billing and coding in 2018. Whether you've attended a billing and coding workshop before or not, this year's information is essential to the sustainability of your practice. Even if administrative staff handles your billing and coding, you need to know this material. Billing and coding expert Joan Slager will help you identify opportunities for improving billing and coding practices using common patient scenarios. Topics will include documentation requirements for ICD-10, calculating the correct evaluation and management code for office visits, and billing for triage visits.

Session Objectives

1. Understand when to use any modifiers for midwifery service
2. Pair ICD-P CM and CPT codes for correct payments and fewer audits
3. Spot PQRS measures associated with ICD-9, ICD-10, CPT and HCPCS codes

Session Highlights

Coding for diagnosis specificity
Coding diagnosis ICD-10
Basic guidelines for coding diagnostic services
CPT codes and code descriptions
